RE: City of Fairburn  
Velocity Road Solutions, Inc.  
Cold Applied - Spray Injection Patching Services

To whom it may concern,

The City of Fairburn contracted Velocity Road Solutions, Inc. to perform Velocity's Cold Applied Spray Injection Patching on primary and secondary roads throughout our City. Velocity's patching process has proven to be a useful part of our roadway maintenance program. Velocity has demonstrated their experience with various repair methods, production rates, cost savings, durability, and their performance of their repairs.

Like many governing agencies, we have had competitors perform spray injection patching in the past with their heated process, equipment, and personnel however the final product did not stand the test of time and traffic. Velocity's Cold Applied Spray Injection Patching as proven to be cleaner, more productive and their patches have lasted without defect not only on regular traveled routes but also extremely heavy and high truck traffic volume roads. We continue to contract Velocity for our maintenance needs and we are pleased to refer Velocity Road Solutions, Inc.'s unique cold applied patching services as a part of your maintenance and pavement preservation programs.

Kindest Regards,
